Innotion Enterprises, Inc.

Announces Its Membership in the Microsoft Gold Certified Partner Program

Chevy Chase, MD—Jan 23, 2007— Innotion Enterprises, Inc. announced today its new membership in the Microsoft Gold Certified Partner Program. Al Espinoza, President & CEO., remarked, "We are excited about the new opportunities this brings for Innotion and our clients, both present and future. Through our enhanced partnership with Microsoft, Innotion will deliver even stronger results for all of our Microsoft initiatives, thus providing even better service to our clients." The Microsoft Gold Certified Partner Program provides a way for customers to identify companies that have proven both commitment and expertise in one or more specialized areas, selected by Microsoft. . Specifically, business intelligence solutions featuring data warehousing, data mart, or OLAP functionality are highlighted. Those Microsoft Certified Partners who meet the highest set of criteria, including advanced certification and a portfolio of real-world customer references, are identified as Gold Certified. Gold Certified partners are the most skilled in the world in specific Microsoft solution areas.

"In order for companies to respond more quickly to customers and understand new market opportunities, they depend on an agile technology environment to empower their company's key decision makers," said Allison Watson, Vice President of the Partner Sales and Marketing Group at Microsoft Corp. "Microsoft recognizes that companies need a high-caliber technology partner who speaks the language of both business and IT and can deliver the most meaningful solutions through technology.

Today, Microsoft recognizes Innotion Enterprises, Inc. for demonstrated customer satisfaction with previous business intelligence deployments. This distinction brings value to the Microsoft Gold Certified Partner Program and makes it clear that Innotion Enterprises, Inc. has both the skills and experience necessary to provide high-quality Business Intelligence solutions, utilizing Microsoft technology."
